Coding Profile | India / Open to Relocation

Professional Summary

Senior AI Full-Stack Engineer with 5+ years of experience building secure, scalable enterprise platforms and Generative AI applications across telecom, fintech, logistics, insurance, and retail. Experienced in delivering end-to-end AI products using React, Angular, Node.js, Python, FastAPI, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), vector search, and AWS.

Built high-concurrency applications supporting $1M+$ users, reduced API latency by 40%, improved document retrieval quality by 35%, and implemented LLM-enabled automation that reduced manual effort by 40%. Strong background in microservices, API engineering, event-driven architecture, cloud deployment, security, CI/CD, and production-quality testing. Seeking UAE-based AI Full-Stack Engineer, GenAI Engineer, Backend Engineer, or Senior Full-Stack Engineer opportunities.

Technical Skills

Generative AI & LLMs: Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangChain, LangGraph, AI Agents, Agentic Workflows, OpenAI API, GPT-4, Claude, Prompt Engineering, Vector Embeddings, Semantic Search, PGVector, Intelligent Search, LLM Workflow Automation

Backend & APIs: Node.js, Express.js, Python, FastAPI, REST APIs, GraphQL, WebSockets, Microservices, Event-Driven Architecture, RabbitMQ, OpenAPI/Swagger, JWT, OAuth 2.0, OpenID Connect (OIDC), RBAC, Rate Limiting, Asynchronous Programming

Frontend: React.js, Next.js, Angular 12−−18, TypeScript, JavaScript (ES6+), Redux Toolkit, RxJS, NgRx, HTML5, CSS3, SCSS, Tailwind CSS, Material UI, Bootstrap, Storybook, Webpack, WCAG 2.1, Core Web Vitals

Databases & Search: PostgreSQL, MongoDB, MySQL, Redis, DynamoDB, PGVector, Database Indexing, Query Optimisation, Caching, Session Management

Cloud & DevOps: AWS Lambda, EC2, S3, CloudFront, Secrets Manager, Docker, Kubernetes, GitLab CI/CD, GitHub Actions, CI/CD Pipelines, SonarQube, OpenTelemetry, Splunk, AppDynamics, Azure (working knowledge)

Testing & Engineering Practices: Jest, Jasmine, Karma, Mocha, Test-Driven Development (TDD), E2E Automation, OWASP ZAP, Secure Coding, SOLID Principles, System Design, Agile/Scrum, JIRA, Code Reviews, Technical Mentoring

Professional Experience

AI Engineer / GenAI Full-Stack Engineer *Jul 2026 – Present*
Enterprise Minds AI *India*

- Building enterprise Generative AI applications using Python, FastAPI, React, LLM APIs, RAG pipelines, vector search, and AI-agent workflows for business automation and knowledge-intelligence use cases.
- Designing scalable backend services and secure API integrations for document ingestion, retrieval, authentication, workflow orchestration, and AI-assisted user experiences.
- Contributing to production readiness through prompt design, retrieval quality improvements, error handling, observability, security controls, and cost-aware LLM implementation.

Software Engineer II — AI Full-Stack Engineer *Apr 2025 – Jun 2026*
Concentrix Catalyst *Hyderabad, India*

- Owned full-stack and Generative AI delivery for a telecom Identity and Access Management (IAM) platform serving $1M+$ global users, working across React, Angular, Node.js, Python, AWS, microservices, and AI-enabled automation.
- Designed and deployed a production RAG solution using LangChain, OpenAI GPT-4, PGVector, and semantic search, improving enterprise document retrieval quality by 35% and reducing time spent on knowledge discovery for support and operations teams.
- Built LLM-powered intelligent search and workflow automation using LangGraph-based orchestration, automating classification and routing workflows and reducing manual processing effort by 40%.

- Re-engineered authentication and identity journeys in Angular 17 and React 18 using reactive forms, route guards, and optimized user flows; increased task completion by 25% on a mission-critical platform.
- Reduced API latency by 40% by decomposing monolithic services into Node.js/Express.js microservices and Python FastAPI integrations, while optimizing REST and GraphQL endpoints.
- Implemented JWT, OAuth 2.0, and OIDC authentication patterns to strengthen access security across frontend and backend services.
- Automated containerized deployments and AI workflow processing using AWS Lambda, S3, Docker, GitLab CI/CD, and SonarQube; reduced deployment effort by 30%.
- Migrated synchronous workloads to RabbitMQ-based event-driven services, improving resilience and enabling independent horizontal scaling during peak traffic.
- Mentored 4−−6 engineers on TypeScript, LangChain patterns, Playwright testing, and clean architecture; helped establish quality gates and achieve 90%+ automated test coverage.
- Received the Excellence Award 2025 for engineering impact, platform performance improvements, GenAI integration, and delivery quality.

Software Development Engineer — Full-Stack & GenAI *Sep 2021 – Mar 2025*
BridgeNext India Private Limited *Pune, India*

- Delivered enterprise MEAN/MERN applications and AI-enabled capabilities for fintech, logistics, insurance, and retail clients; led frontend architecture, backend API development, testing strategy, and technical delivery for a 6-member engineering team.
- Implemented early LLM-based search and workflow automation capabilities using LangChain and OpenAI APIs, improving content relevance by 40% and reducing repetitive classification effort.
- Improved frontend performance by 30% across enterprise React.js and Angular applications supporting $100K+$ concurrent users through code splitting, lazy loading, Redux Toolkit, and Webpack optimization.
- Designed scalable Node.js/Express.js REST APIs and Python FastAPI services with PostgreSQL and MongoDB; reduced P95 response times by 20% through database indexing, query optimization, and API improvements.
- Built Playwright and Jest automation suites achieving 90%+ test coverage; introduced TDD, OWASP ZAP security testing, and SonarQube quality gates, improving code-quality scores by 12%.
- Led migration of a 40,000+-line Polymer codebase to React, maintaining quality standards and introducing JSDoc documentation, OpenAPI contracts, and reusable frontend architecture.
- Built real-time logistics tracking and inventory dashboard features using WebSockets, along with integration adapters for payment APIs, notification services, and document-generation workflows.
- Implemented RBAC middleware, JWT authentication, and PII masking to support secure handling of user and transaction data.
- Received Spot Awards in 2022 and 2023, and an Excellence Award in 2024, for high-impact engineering delivery across enterprise client engagements.

Software Development Engineer Intern *May 2021 – Aug 2021*
XenonStack *Remote*

- Supported development of web applications and backend services, contributing to frontend components, API integrations, debugging, testing, and Agile delivery workflows.
- Collaborated remotely with engineering teams to resolve defects, improve application functionality, and gain hands-on experience in full-stack development practices.

Selected Achievements

- Delivered platforms and digital experiences serving $1M+$ users with 99.9% availability targets.
- Reduced backend API latency by 40%, improved RAG retrieval quality by 35%, and enabled workflow automation that reduced manual operational effort by 40%.
- Received three Excellence Awards and two Spot Awards for engineering delivery, platform performance, and client impact.

Education

Bachelor of Technology - IT *2021*
Netaji Subhash Engineering College, India *8.3 CGPA*
